

# KEEP YOUR SMILE WITH DENTAL IMPLANTS

## Dental Implants

***Do you want to Improve your smile? Replace missing teeth? Improve Chewing?***

Dental Implants are a safe and reliable treatment solution to replace missing teeth!

### What are dental implants?

- Process of replacing missing teeth or teeth that cannot be saved by conventional means.
- Can be used for single tooth replacement, multiple tooth replacement and full arch replacement.
- Made from titanium which is inserted into the jawbone to which crowns, bridges or a denture can be attached once the surrounding tissues heal.

### Why should I replace teeth that are missing?

- For cosmetic reasons, avoiding any gaps in your smile and maintaining the shape of your face.
- To reduce the pressure on the other teeth (and any dental work that may be on them)
- Reduce the chances of developing jaw problems
- Replacement of missing teeth is essential to maintaining the bone in the jaw. The longer a tooth is missing the more bone is lost in that site
- The actual dental implant replaces the root of the missing tooth
- Dental Implants allow us to replace missing teeth without harming the healthy natural teeth adjacent to the space.

Replacing teeth as soon as they are lost keeps the mouth in its optimal function so you will hopefully, never have to mash your food! If you are missing one tooth or all of your teeth, implant dentistry might be right for you!
