Service of the Month

Are you planning on increasing the strength of your dental fillings and bonding? Do you feel scared while going to the dentist? If so, then switching to laser dentistry might be the right solution for your treatment.

What is Laser Dentistry?

Laser dentistry allows patients a modern, innovative, and overall more comfortable approach to dental care. Laser therapy offered at Finesse Dental provides patients with a more comfortable, relaxed and quicker dental treatment experience with stunning results.

The Benefits of Laser Dentistry:

- ✓ Laser dentistry allows the patient to have greater comfort during the procedure which is so important.
- ✓ Laser Dentistry helps reduce any swelling and bleeding after the procedure.
- ✓ The Laser gives greater accuracy when removing soft tissue from around the tooth to enhance your smile.
- ✓ The high energy light of the Laser inhibits bleeding and promotes quicker healing of the tissue while creating a constant sterilised environment during the procedure.
- ✓ Damage to the surrounding tissue is minimised.

If you have any further questions or would like to discuss further the advantages of laser dentistry, please contact us here at Finesse Dental. We will be more than happy to accommodate your queries.

'Finesse Dental top tip for Oral hygiene'

People undergoing orthodontic treatment need to have impeccable oral hygiene. Flossing is the key, even if it may seem impossible with the appliance or braces you have on. Floss threaders such as superfloss can be purchased at your local chemist or grocery store.
